Fastmarkets Dashboard Release Notes

24 August 2020

Version 1.5.5860
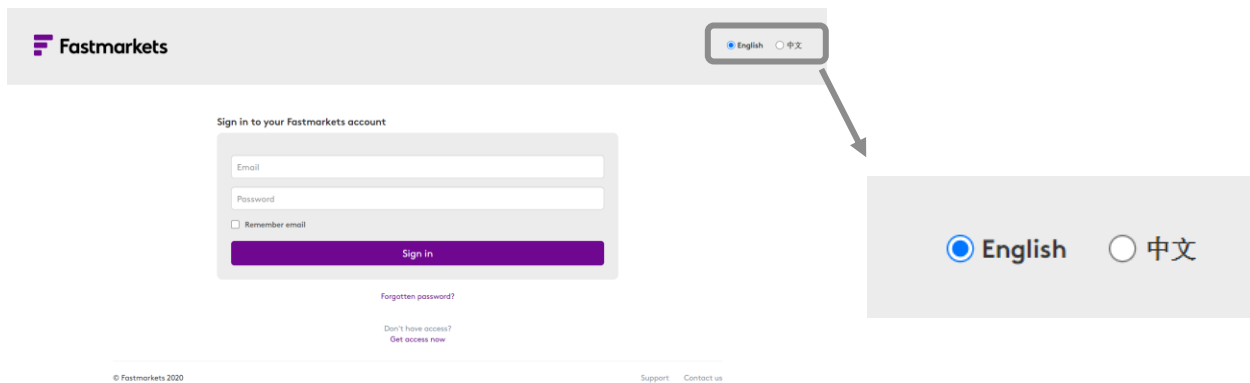

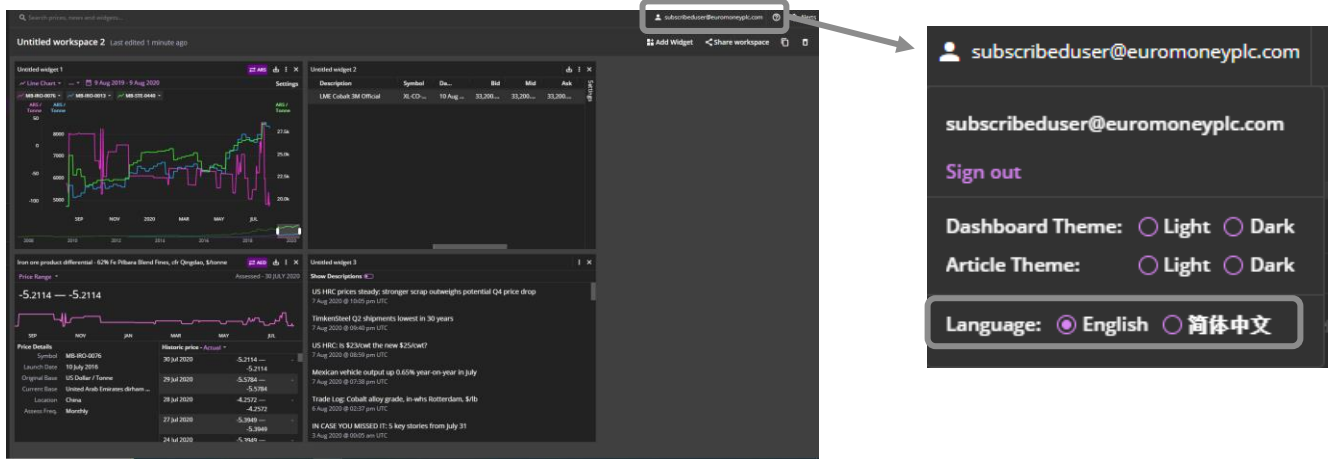

What's New?

New Features

This release of the Fastmarkets Dashboard includes the following new features releases to both the Dashboard desktop installed and web versions unless stated otherwise:

1. Localization

The largest feature set included in this release is the Chinese localization features of the Dashboard. The option to view the Dashboard in Chinese will be available to all Dashboard users. On the login screen, users will be able to select their language (English or Chinese). This selection will default to the language of the user's browser.

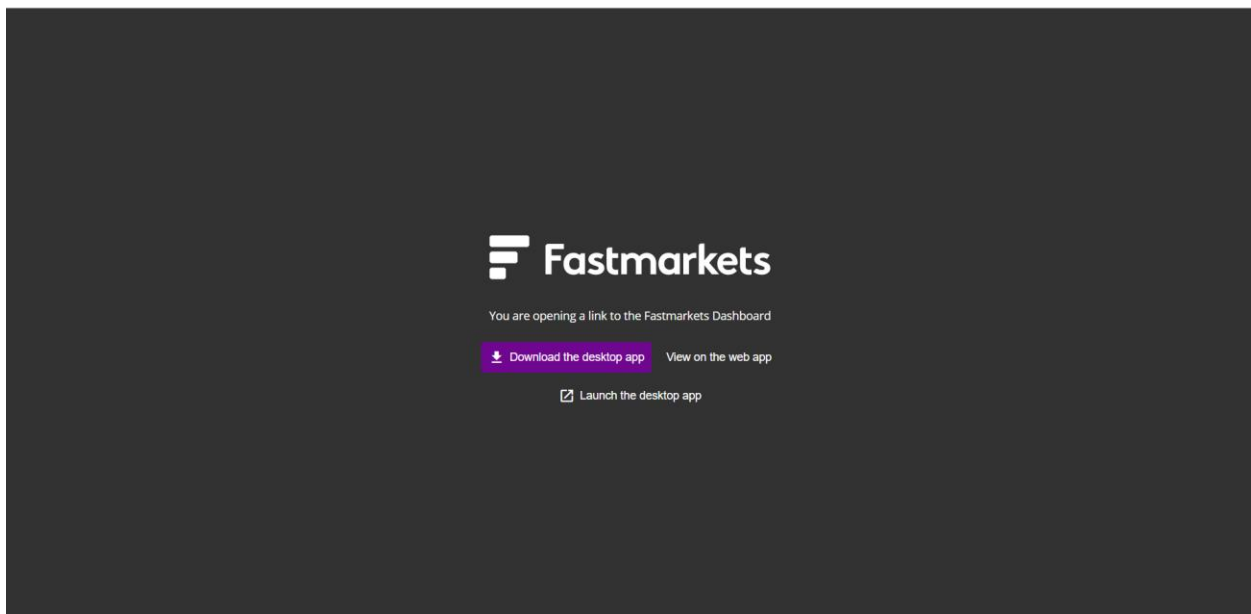

The language selected on the login screen will determine the language of the dashboard. However, users will be able to change this any time by clicking on the user name at the top right hand corner and selecting the language switcher button in the main Setting dropdown.

Please note instructional buttons, Search and dates will be translated into Chinese, however, not all elements of pricing or descriptions or news articles are translated.
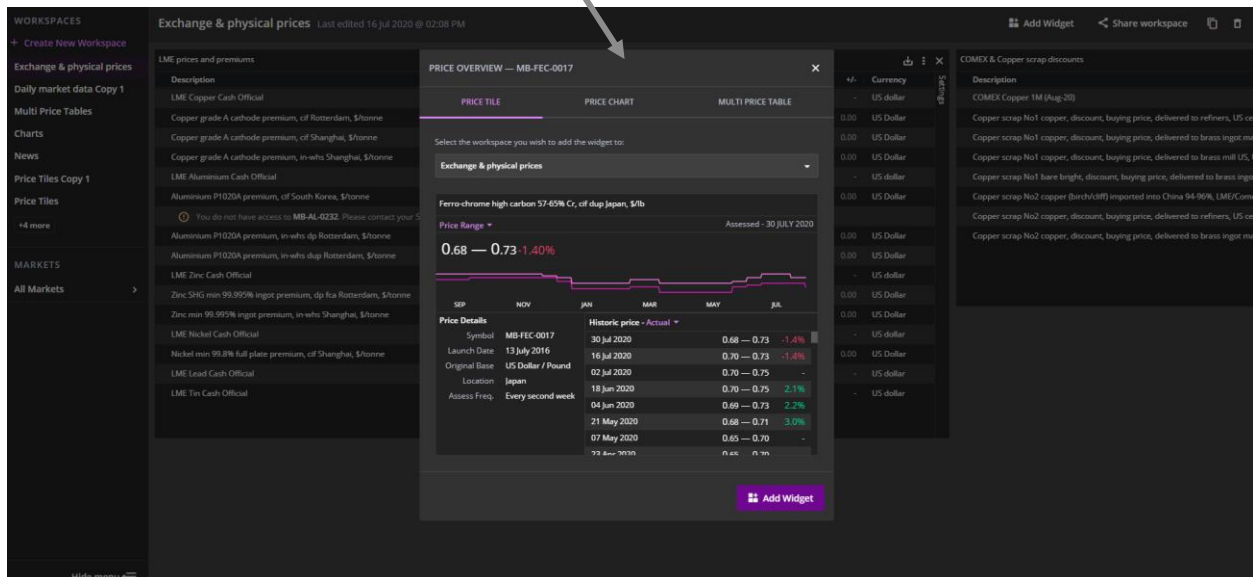

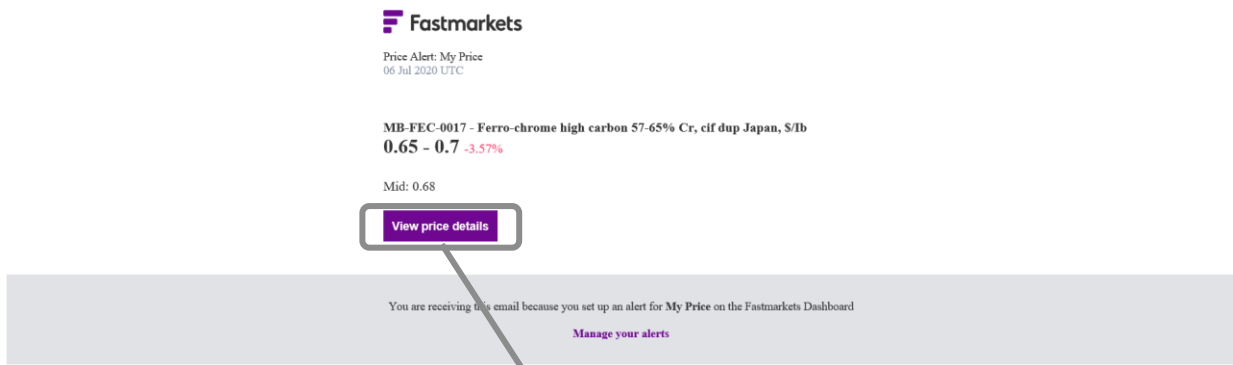

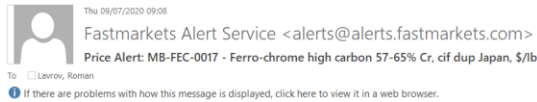

2. Deep linking

With this new release all Metals customers will be able to use web links to open the Desktop app. This means if a Dashboard user receives an email alert with a link to a price or a news article when they click the link they will be taken to a page that asks them if they want to use the web or the Desktop. This will also happen if a link is shared between two different Dashboard users. This applies to sharing Workspaces, articles and prices. The page they will see is as follows.
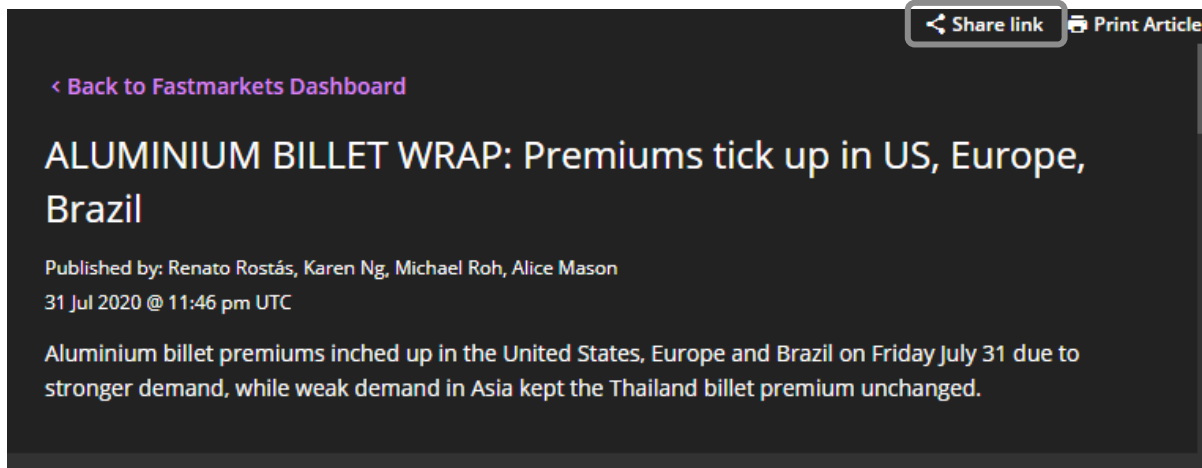

3. Price email alerts

With the new version the price email alerts will contain a link to open the price in a price overview window, from here the user can add the price to their preferred workspace with their preferred widget.
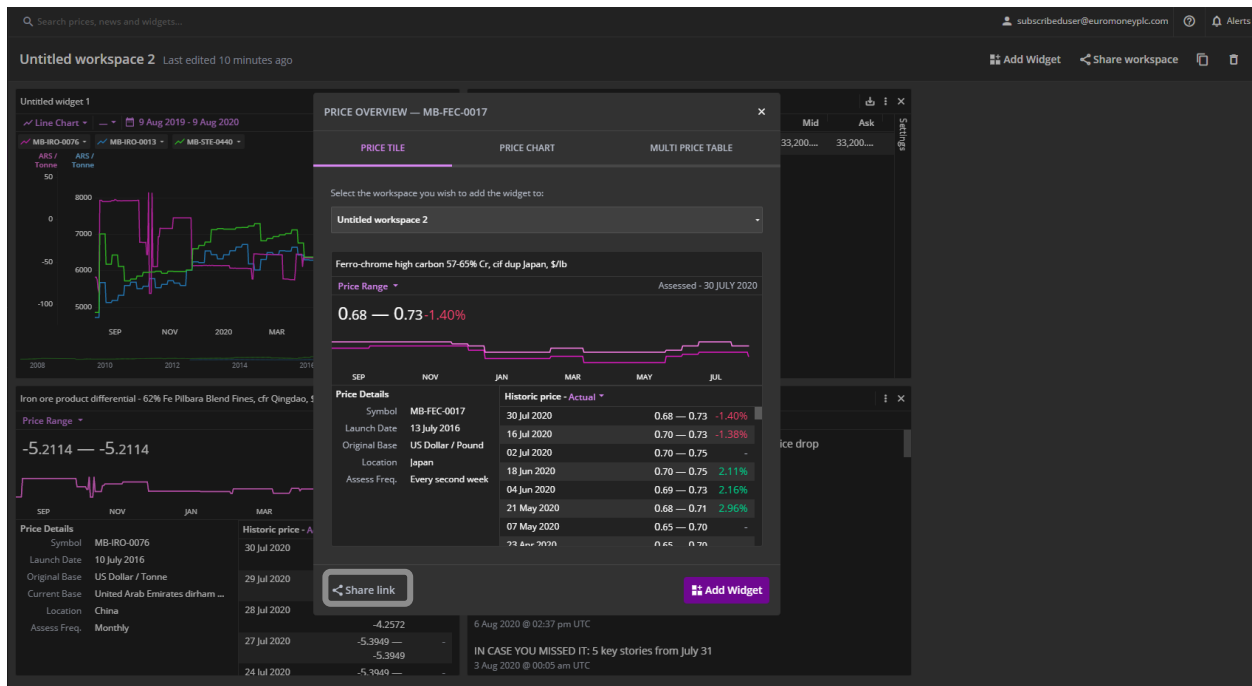

4. Article and price sharing

In addition to the Workspace sharing that was added previously, with this new release Dashboard users will be able to share articles and individual prices with other Dashboard users.

For articles the sharing link is available from every article page.

For prices the share link is available when a price has been found through search and the price overview window is opened. This same view is what opens when a price link is opened from the price email alert.

5. Clear all alert notifications

In the previous version of the Dashboard, if users wanted to clear previous alert notifications, they had to clear them one by one. In this new release, users will be able to clear all notifications by one click using the option at the bottom of the Alert history panel. (see screenshot below).

Known issues

There are no known issues with this release.

Breaking Changes

There are no breaking changes with this release.
